## A Letter From The Author:

# Why We Created This Report And Who Should Read It

From The Desk of: Darryl Cresswell  
President & CEO – MYDWARE IT Solutions Inc.

Dear Colleague,

When you decided to look into transitioning your computer network and operations to the cloud, you were probably met with conflicting advice, confusion and no real answers to your questions and concerns over security, cost and whether or not it's appropriate for your organization.

That's why we wrote this report. **We wanted to give CEOs a simple, straightforward guide that not only answers your questions in plain English, but also provides vital experience-based information that most IT companies don't know (or may not tell you) that could turn your migration into a big, cash-draining nightmare.**

My name is Darryl Cresswell, President and CEO of MYDWARE IT Solutions Inc. We've been providing IT services to businesses in the GTA and Simcoe area for over 20 years now. You may not have heard of us before, but I'm sure you're familiar with one or more of the companies who are clients of ours. A few of their comments are enclosed.

The simple fact is, cloud computing is NOT a good fit for every company, and if you don't get all the facts or fully understand the pros and cons, you can end up making some VERY poor and expensive decisions that you'll deeply regret later. The information in this report will arm you with the critical facts you need to avoid expensive, time-consuming mistakes.

Of course, we are always available as a resource for a second opinion or quick question, so please feel free to contact my office direct if we can clarify any points made in this report or answer any questions you have.

Dedicated to serving you,

Darryl Cresswell

**REPORT | 5 Critical Facts Every Business Owner Must Know Before Moving Their Network To The Cloud**

**GTA: 905-731-9687 Simcoe County: 705-881-1844 Toronto: 416-907-8018 | <https://mydware.com>**

## About The Author

I'm an entrepreneur by necessity since age 13. Growing up flat broke and unable to obtain meaningful employment was a horrible experience. It was an everyday struggle to survive that I would never want to re-live. Wanting to provide a better life for my children than I had, I founded MYDWARE IT Solutions Inc. with the goal of being financially independent and bringing enterprise grade IT service to small business all over the GTA and Simcoe County.

Supporting my family and my local community is a great accomplishment for me. I know firsthand what it's like to struggle, so giving back to local families and children in need is something I do regularly. When I was a child and struggling, I made a promise to myself that I would give back and help others if I was ever in position to do so.

I love helping the underdog, and I really despise when good people are taken advantage of and exploited. In the early days this came in the form of super expensive phone systems and IT services that were out of the reach of nearly every SMB's I helped. More recently its cybercriminals stealing from hard working entrepreneurs that really bothers me a lot. I am passionate about cybersecurity and I've since made it my personal mission to protect as many local small businesses as possible.

 **PERSONAL NOTE:** Whenever possible, I love donating and helping others in need. During the 2020 Global Pandemic I became an Amazon bestselling author in 3 categories with my Cybersecurity book "On Thin Ice". Being an author was never something I aspired to be, but it did allow me the opportunity to again give back to those in need. I donated all proceeds from the book to St Jude's children's hospital to help children and families dealing with horrible life altering diseases and I would do it all again in a heartbeat.

## 5 Critical Facts You Must Know Before Moving To The Cloud

In this report I'm going to talk about **5 very important facts you need to know before you consider cloud computing for your company**. These include:

1. The pros AND cons you need to consider before moving to the cloud.
2. Migration GOTCHAS (and how to avoid them).
3. The various types of cloud computing options you have (there are more than just one).
4. Answers to important, frequently asked questions you need to know the answers to.
5. What questions you need to ask your IT pro before letting them "sell" you on moving all or part of your network and applications to the cloud.

I've also included some actual case studies from other businesses that have moved to cloud computing, so you can see the impact this new technology can have on your IT budget.

At the end of this report there is an invitation for you to request a **Free Cloud Readiness Assessment** to determine if cloud computing is right for your particular business. I encourage you to take advantage of this before making any decisions since we've designed it to take a hard look at

**REPORT |**

**5 Critical Facts Every Business Owner Must Know  
Before Moving Their Network To The Cloud**

**GTA: 905-731-9687 Simcoe County: 705-881-1844 Toronto: 416-907-8018 | <https://mydware.com>**

the functionality and costs for you as a business and provide you with the specific information you need (not hype) to make a good decision about this new technology.

## What Is Cloud Computing?

Wikipedia defines cloud computing as “the use and access of multiple server-based computational resources via a digital network (WAN, Internet connection using the World Wide Web, etc.).”

### But what the heck does *that* mean?

The easiest way to not only understand what cloud computing is but also gain insight into why it's gaining in popularity is to compare it to the evolution of public utilities. For example, let's look at the evolution of electricity.

Back in the industrial age, factories had to produce their own power in order to run machines that produced the hard goods they manufactured. Be it textiles or railroad spikes, using machines gave these companies enormous competitive advantages by producing more goods with fewer workers and in less time. For many years, the production of power was every bit as important to their company's success as the skill of their workers and quality of their products.

**Unfortunately, this put factories into TWO businesses:** the business of producing their goods and the business of producing power. Then the concept of delivering power (electricity) as a utility was introduced by Thomas Edison when he developed a commercial-grade replacement for gas lighting and heating using centrally generated and distributed electricity. From there, as they say, the rest was history.

The concept of electric current being generated in central power plants and delivered to factories as a utility caught on fast. This meant manufacturers no longer had to be in the business of producing their own power with enormous and expensive water wheels. **In fact, in a very short period of time, it became a competitive necessity for factories to take advantage of the lower-cost option being offered by public utilities.** Almost overnight, thousands of steam engines and electric generators were rendered obsolete and left to rust next to the factories they used to power.

What made this possible was a series of inventions and scientific breakthroughs – but what drove the demand was pure economics. Utility companies were able to leverage economies of scale that single manufacturing plants simply couldn't match in output or in price. In fact, the price of power dropped so significantly that it quickly became affordable for not only factories but every single household in the country.

**Today, we are in a similar transformation following a similar** course. The only difference is that instead of cheap and plentiful electricity, advancements in technology and Internet connectivity are driving down the costs of computing power. With cloud computing, businesses can pay for “computing power” like a utility without having the exorbitant costs of installing, hosting and supporting it on premise.

**REPORT |**

**5 Critical Facts Every Business Owner Must Know  
Before Moving Their Network To The Cloud**

**GTA: 905-731-9687 Simcoe County: 705-881-1844 Toronto: 416-907-8018 | <https://mydware.com>**

In fact, you are probably already experiencing the benefits of cloud computing in some way but hadn't realized it. Below are a number of cloud computing applications, also called SaaS or "software as a service," you might be using:

- Gmail, Hotmail or other free e-mail accounts
- Facebook
- NetSuite, Salesforce
- Constant Contact, Exact Target, AWeber or other e-mail broadcasting services
- Zoomerang, SurveyMonkey and other survey tools
- LinkedIn
- Twitter
- All things Google (search, AdWords, maps, etc.)

If you think about it, almost every single application you use today can be (or already is) being put "in the cloud" where you can access it and pay for it via your browser for a monthly fee or utility pricing. You don't purchase and install software but instead access it via an Internet browser.

## What About Microsoft 365 And Google Apps?

Microsoft 365 and Google Apps are perfect examples of the cloud computing trend; for an inexpensive monthly fee, you can get full access and use of Microsoft Office applications that used to cost a few hundred dollars to purchase. And, since these apps are being powered by the cloud provider, you don't need an expensive desktop with lots of power to use them – just a simple Internet connection will do on a laptop, desktop or tablet.

## Pros And Cons Of Moving To The Cloud

As you read this section, keep in mind there is no "perfect" solution. All options – be it an in-house, on-premise server or a cloud solution – have upsides and downsides that need to be evaluated on a case-by-case scenario. (Warning: Do NOT let a cloud expert tell you there is only "one way" of doing something!)

Keep in mind the best option for you may be a **hybrid solution** where some of your applications and functionality are in the cloud and some are still hosted and maintained from an in-house server. We'll discuss more of this in a later section; however, here are the general pros and cons of cloud computing:

### Pros Of Cloud Computing:

- **Lowered IT costs.** This is probably the single most compelling reason why companies choose to move their network (all or in part) to the cloud. Not only do you save money on software licenses, but on hardware (servers and workstations) as well as on IT support and upgrades. So, if you hate constantly writing cash-flow-draining checks for IT upgrades, you'll really want to look into cloud computing.

**REPORT |**

**5 Critical Facts Every Business Owner Must Know  
Before Moving Their Network To The Cloud**

**GTA: 905-731-9687 Simcoe County: 705-881-1844 Toronto: 416-907-8018 | <https://mydware.com>**

Included in this report are examples of how we've done this for other clients and what the savings have been.

- **Ability to access your desktop and/or applications from anywhere and any device.** If you travel a lot, have remote workers or prefer to use an iPad while traveling and a laptop at your house, cloud computing will give you the ability to work from any of these devices.
- **Disaster recovery and backup are automated.** The server in your office is extremely vulnerable to a number of threats, including viruses, human error, hardware failure, software corruption and, of course, physical damage due to a fire, flood or other natural disaster. If your server were in the cloud and (God forbid) your office was reduced to a pile of rubble, you could purchase a new laptop and be back up and running within the same day. This would NOT be the case if you had a traditional network and were using tape drives, CDs, USB drives or other physical storage devices to back up your system.

Plus, like a public utility, cloud platforms are far more robust and secure than your average business network because they can utilize economies of scale to invest heavily into security, redundancy and failover systems, making them far less likely to go down.

- **It's faster, cheaper and easier to set up new employees.** If you have a seasonal workforce or a lot of turnover, cloud computing will not only lower your costs of setting up new accounts, but it will make it infinitely faster. We currently provide IT support for a local accounting firm that brings on an average of 10 extra CPAs in February through May to help process tax returns. If they had a traditional network setup, they would have to purchase expensive PCs and software licenses for these temporary workers and then pay to maintain and upgrade them throughout the year. Using cloud computing, these workers use their home PCs and log in to the network securely. The CPA firm ONLY pays for those workers' licenses during the time they are using them, just like a utility. When May comes around, they no longer pay for those licenses and support. Using this model saves them approximately \$13,468 a year in hardware, software and IT services.
- **You use it without having to "own" it.** More specifically, you don't own the *responsibility* of having to install, update and maintain the infrastructure. Think of it as similar to living in a condo where someone else takes care of the building maintenance, repairing the roof and mowing the lawn, but you still have the only key to your section of the building and use of all the facilities. This is particularly attractive for companies that are new or expanding, but don't want the heavy outlay of cash for purchasing and supporting an expensive computer network.
- **It's a "greener" technology that will save on power and your electric bill.** For some smaller companies, the power savings will be too small to measure. However, for larger companies with multiple servers that are cooling a hot server room and keep their servers running 24/7/365, the savings are considerable.

## 5 Critical Facts Every Business Owner Must Know Before Moving Their Network To The Cloud

GTA: 905-731-9687 Simcoe County: 705-881-1844 Toronto: 416-907-8018 | <https://mydware.com>

## Cons Of Cloud Computing:

- **The Internet going down.** While you can mitigate this risk by using a commercial-grade Internet connection and maintaining a second backup connection, there is a chance you'll lose Internet connectivity, making it impossible to work.
- **Data security.** Many people don't feel comfortable having their data in some off-site location. This is a valid concern, and before you choose any cloud provider, you need to find out more information about where they are storing your data, how it's encrypted, who has access and how you can get it back. You'll find more information on this under "What To Look For When Hiring A Cloud Integrator" later on in this document.

## Migration Gotchas! What You Need To Know About Transitioning To A Cloud-Based Network

When done right, a migration to Microsoft Office 365 or another cloud solution should be like any other migration. There's planning that needs to be done, prerequisites that have to be determined and the inevitable "quirks" that need to be ironed out once you make the move.

Every company has its own unique environment, so it's practically impossible to try and plan for every potential pitfall; however, here are some BIG things you want to ask your IT consultant about BEFORE making the leap.

**Downtime.** Some organizations cannot afford ANY downtime, while others can do without their network for a day or two. Make sure you communicate YOUR specific needs regarding downtime and make sure your IT provider has a solid plan to prevent extended downtime.

**Painfully Slow Performance.** Ask your IT consultant if there's any way you can run your network in a test environment before making the full migration. Imagine how frustrated you would be if you migrate your network and discover everything is running so slow you can barely work! Again, every environment is slightly different, so it's best to test before you transition.

**3rd-Party Applications.** If your organization has plug-ins to Exchange for faxing, voice mail or integration into another application, make sure you test to see if it will still work in the new environment.

## Different Types Of Cloud Solutions Explained:

**Pure Cloud:** This is where all your applications and data are put on the other side of the firewall (in the cloud) and accessed through various devices (laptops, desktops, iPads, phones) via the Internet.

**REPORT |**

**5 Critical Facts Every Business Owner Must Know  
Before Moving Their Network To The Cloud**

**GTA: 905-731-9687 Simcoe County: 705-881-1844 Toronto: 416-907-8018 | <https://mydware.com>**

**Hybrid Cloud:** Although “pure” cloud computing has valid applications, for many it’s downright scary. And in some cases, it is NOT the smartest move, due to compliance issues, security restrictions, speed and performance. A hybrid cloud enables you to put certain pieces of existing IT infrastructure (say, storage and e-mail) in the cloud, and the remainder of the IT infrastructure stays on-premises. This gives you the ability to enjoy the cost savings and benefits of cloud computing where it makes the most sense without risking your entire environment.

**Single Point Solutions:** Another option would be to simply put certain applications, like SharePoint or Microsoft Exchange, in the cloud while keeping everything else on-site. Since e-mail is usually a critical application that everyone needs and wants access to on the road and on various devices (iPad, smartphone, etc.), often this is a great way to get advanced features of Microsoft Exchange without the cost of installing and supporting your own in-house Exchange server.

**Public Cloud Vs. Private Cloud:** A public cloud is a service that anyone can tap into with a network connection and a credit card. They are shared infrastructures that allow you to pay-as-you-go and are managed through a self-service web portal. Private clouds are essentially self-built infrastructures that mimic public cloud services but are on-premises. Private clouds are often the choice of companies who want the benefits of cloud computing, but don’t want their data held in a public environment.

## **FAQs About Security, Where Your Data Is Held And Internet Connectivity**

**Question:** How long will it take to transition my on-premises server to the cloud, and what’s the process?

**Answer:** Transition time varies depending on several factors. For example, how much data is being moved, how many line-of-business-applications are migrating and so forth. We’ve completed transition as fast as a day, and as long as 3 months. Your time will vary depending on your specific needs. Our team of experts will be able to provide you a proper transition timeline and migration path.

**Question:** What if my Internet connection goes down? How will we be able to work?

**Answer:** While this is a valid concern, we overcome it in the following way for our clients in the cloud. Once you are in the cloud, setting up redundancies for internet is a whole lot simpler than setting up redundancies for servers on premise. Adding backup internet (Cable, DSL, Fiber etc....) or even LTE are very common ways to overcome losing your primary internet connection.

**Question:** What happens if the Internet slows to the point where it’s difficult to work productively?

**Answer:** We resolve this by keeping a synchronized copy of your data on your on-site server as well as in the cloud. Here’s how this works: Microsoft offers a feature with Windows called “DFS,” which stands for Distributed File Systems. This technology

**REPORT | 5 Critical Facts Every Business Owner Must Know  
Before Moving Their Network To The Cloud**

**GTA: 905-731-9687 Simcoe County: 705-881-1844 Toronto: 416-907-8018 | <https://mydware.com>**

synchronizes documents between cloud servers and local servers in your office. So instead of getting rid of your old server, we keep it on-site and maintain an up-to-date synched copy of your files, folders and documents on it. If the Internet goes down or slows to a grind, you simply open a generic folder on your PC and the system will automatically know to pull the documents from the fastest location (be it the cloud server or the local one). Once a file is modified, it syncs it in seconds, so you don't have to worry about having multiple versions of the same document. Using this process, you get the benefits of cloud with a backup solution to keep you up and running during slow periods or complete Internet outages.

**Question: What about security? Isn't there a big risk of someone accessing my data if it's in the cloud?**

**Answer:** In many cases, cloud computing is a MORE secure way of accessing and storing data. Just because your server is on-site doesn't make it more secure; in fact, most small to medium businesses can't justify the cost of securing their network the way a cloud provider can. And most security breaches occur due to human error – one of your employees downloads a file that contains a virus, they don't use secure passwords, or they simply e-mail confidential information out to people who shouldn't see it. Other security breaches occur in on-site networks because the company didn't properly maintain their own in-house network with security updates, software patches and up-to-date antivirus software. That's a FAR more common way networks get compromised versus a cloud provider getting hacked.

**Question: What if YOU go out of business? How do I get my data back?**

**Answer:** We give every client network documentation that clearly outlines where their data is and how they could get it back in the event of an emergency. This includes emergency contact numbers, detailed information on how to access your data and infrastructure without needing our assistance (although our plan is to always be there to support you), a copy of our insurance policy and information regarding your backups and licensing.

We also give you a copy of OUR disaster recovery plan that shows what we've put in place to make sure we stay up and running.

In fact, you should never hire ANY IT professional who won't give you that information. We also provide you constant access to all your data and passwords every month, so you have a access to your data at all times. Any IT provider who does not provide you access to your data and secure access to ALL your passwords at all times should be avoided at all costs.

**Question: Do I have to purchase new hardware (servers, workstations) to move to the cloud?**

**Answer:** No! That's one of the selling points of cloud computing. It allows you to use older workstations, laptops and servers because the computing power is in the cloud. Not only

**REPORT |**

**5 Critical Facts Every Business Owner Must Know  
Before Moving Their Network To The Cloud**

**GTA: 905-731-9687 Simcoe County: 705-881-1844 Toronto: 416-907-8018 | <https://mydware.com>**

does that allow you to keep and use hardware longer, but it allows you to buy cheaper workstations and laptops because you don't need the expensive computing power required in the past. In most cases we see clients extending the life of their hardware by leveraging the cloud to run their workloads instead of their local PC's.

## What To Look For When Hiring An IT Consultant To Move Your Network To The Cloud

Unfortunately, the IT consulting industry (along with many others) has its own share of incompetent or unethical people who will try to take advantage of trusting business owners who simply do not have the ability to determine whether or not they know what they are doing. Sometimes this is out of greed for your money; more often it's simply because they don't have the skills and competency to do the job right but won't tell you that up front because they want to make the sale.

From misleading information, unqualified technicians and poor management to terrible customer service, we've seen it all, and we know they exist in abundance because we have had a number of customers come to us to clean up the disasters they have caused.

Automotive repair shops, electricians, plumbers, lawyers, realtors, dentists, doctors, accountants, etc., are heavily regulated to protect the consumer from receiving substandard work or getting ripped off. However, the computer industry is still highly unregulated and there are few laws in existence to protect the consumer – which is why it's so important for you to really research the company or person you are considering, to make sure they have the experience to set up, migrate and support your network to the cloud.

Anyone who can hang out a shingle can promote themselves as a "cloud expert." Even if they are honestly *trying* to do a good job for you, their inexperience can cost you dearly in your network's speed and performance or in lost or corrupt data files. To that end, here are the KEY QUESTIONS you should ask your IT person before letting them migrate your network to the cloud.

### REPORT | 5 Critical Facts Every Business Owner Must Know Before Moving Their Network To The Cloud

GTA: 905-731-9687 Simcoe County: 705-881-1844 Toronto: 416-907-8018 | <https://mydware.com>

# **Critical Questions To Ask Your IT Company Or Computer Consultant BEFORE Letting Them Move Your Network To The Cloud (Or Touch Your Network!)**

**Question: How many clients have you provided cloud services for to date and can you provide references?**

**Answer:** You don't want someone practicing on your network. At a minimum, make sure they have years of experience in this area and the majority of their clients already fully leveraging cloud technologies. For example we leverage cloud technology across the board for 100% of our clients.

**Question: How quickly do they guarantee to have a technician working on an outage or other problem?**

**Answer:** Anyone you pay to support your network should give you a written SLA (service level agreement) that outlines exactly how IT issues get resolved and in what time frame. I would also request that they reveal what their average resolution time has been with current clients over the last three to six months.

They should also answer their phones live from 8:00 a.m. to 5:00 p.m. and provide you with an emergency after-hours number you may call if a problem arises, including on weekends.

If you cannot access your network because the Internet is down or due to some other problem, you can't be waiting around for hours for someone to call you back OR (more importantly) start working on resolving the issue. Make sure you get this in writing; often cheaper or less experienced consultants won't have this or will try and convince you it's not important or that they can't do this. Don't buy that excuse! They are in the business of providing IT support, so they should have some guarantees or standards around this they share with you.

**Question: What's your plan for transitioning our network to the cloud to minimize problems and downtime?**

**Answer:** We run a simultaneous cloud environment during the transition and don't "turn off" the old network until everyone is 100% confident that everything has been transitioned and is working effortlessly. You don't want someone to switch overnight without setting up a test environment first.

**Question: Do you provide a no-risk trial of our network in the cloud to test the proof of concept BEFORE we commit to a long-term contract?**

**Answer:** We provide all of our clients a free 30-day cloud "test drive" using your servers, applications and data so you can see, first-hand, what it will be like for you and your staff to move your servers to the cloud. While this isn't a full migration, it will give you a true feel for what cloud computing will be like BEFORE committing to a long-term contract. There is no charge for this and

**REPORT | 5 Critical Facts Every Business Owner Must Know Before Moving Their Network To The Cloud**

**GTA: 905-731-9687 Simcoe County: 705-881-1844 Toronto: 416-907-8018 | <https://mydware.com>**

no obligation to buy anything. At the end of the 30 days, you'll know whether or not this is a right fit for you, or if you would prefer to keep your current on-site network.

**Question: Do they take the time to explain what they are doing and answer your questions in terms that you can understand (not geek-speak), or do they come across as arrogant and make you feel stupid for asking simple questions?**

**Answer:** Our technicians are trained to have the "heart of a teacher" and will take time to answer your questions and explain everything in simple terms. Our clients consistently rate our technicians at a 9.7 in customer service on a scale of 1 to 10 with '10' being the highest possible score.

**Question: Where will your data be stored?**

**Answer:** You should receive full documentation about where your data is, how it's being secured and backed up and how you could get access to it if necessary, WITHOUT going through your provider. Essentially, you don't want your cloud provider to be able to hold your data (and your company) hostage.

**Question: How will your data be secured and backed up?**

**Answer:** If they tell you that your data will be stored in their own co-lo in the back of their office, what happens if THEY get destroyed by a fire, flood or other disaster? What are they doing to secure the office and access? Are they backing it up somewhere else? Make sure they are SAS 70 certified and have a failover plan in place to ensure continuous service in the event that their location goes down. If they are building on another platform, you still want to find out where your data is and how it's being backed up.

**Question: What is THEIR disaster recovery plan? What happens if they go out of business?**

**Answer:** All of our clients maintain FULL access to all of their passwords, cloud servers, data and backups at all times. When evaluating an IT provider, ask them where your cloud data is stored. If they run your servers, data, and backups out of their own data centers or servers this presents a LARGE risk to your organization if they go out of business. We leverage reputable cloud storage like Azure, AWS and others to ensure you're protected from this.

**Question: Do they have adequate errors-and-omissions insurance as well as workers' compensation insurance to protect YOU?**

**Answer:** Here's something to consider: if THEY cause a problem with your network that causes you to be down for hours or days or to lose data, who's responsible? Here's another question to consider: if one of their technicians gets hurt at your office, who's paying? In this litigious society we live in, you better make darn sure that whomever you hire is adequately insured with both errors-and-omissions insurance AND workers' compensation – and don't be shy about asking to see their latest insurance policies!

**True Story:** A few years ago, Geek Squad was slapped with multimillion-dollar lawsuits from customers for the bad behavior of their technicians. In some cases, their techs were accessing, copying and distributing personal information they gained access to on customers' PCs and laptops brought in for repairs. In other cases, they lost clients' laptops (and subsequently all the data on

## **REPORT | 5 Critical Facts Every Business Owner Must Know Before Moving Their Network To The Cloud**

**GTA: 905-731-9687 Simcoe County: 705-881-1844 Toronto: 416-907-8018 | <https://mydware.com>**

them) and tried to cover it up. Bottom line: Make sure the company you are hiring has proper insurance to protect YOU.

**Question: Is it standard procedure for them to provide you with written network documentation detailing what software licenses you own, your critical passwords, user information, hardware inventory, etc., or are they the only person with the “keys to the kingdom”?**

**Answer:** All clients receive this in written and electronic form at no additional cost. We also perform a quarterly update on this material and make sure certain key people from your organization have this information and know how to use it, giving you complete control over your network.

Side Note: You should NEVER allow an IT person to have that much control over you and your company. If you get the sneaking suspicion that your current IT person is keeping this under their control as a means of job security, get rid of them (and we can help to make sure you don't suffer ANY ill effects). This is downright unethical and dangerous to your organization, so don't tolerate it!

**Question: Do they have other technicians on staff who are familiar with your network in case your regular technician goes on vacation or gets sick?**

**Answer:** Yes, and since we keep detailed network documentation (basically a blueprint of your computer network) and updates on every client's account, any of our technicians can pick up where another left off.

**Question: Do they INSIST on doing periodical test restores of your backups to make sure the data is not corrupt and could be restored in the event of a disaster?**

**Answer:** We perform a monthly “fire drill” and perform a test restore from backup for our clients to make sure their data CAN be recovered in the event of an emergency. Upon completion, we then give our clients a report showing this test restore was conducted and that all systems are a “go.” If there's a problem, we notify our clients immediately and start working to resolve it the same day. After all, the WORST time to “test” a backup is when you desperately need it.

**Question: Is their help desk Canada-based or outsourced to an overseas company or third party?**

**Answer:** We provide our own in-house help desk and make sure the folks helping you are friendly and helpful. We consider this one of the most important aspects of customer service, plus we feel it's an important step in keeping your data secure.

**Question: Do their technicians maintain current vendor certifications and participate in ongoing training – or are they learning on your dime?**

**Answer:** Our technicians are required to keep the most up-to-date vendor certifications in all the software we support. Plus, our hiring process is so stringent that 99% of the technicians who apply don't make it through. (Guess who's hiring them?)

**Question: Are they familiar with (and can they support) your unique line-of-business applications?**

**GTA: 905-731-9687 Simcoe County: 705-881-1844 Toronto: 416-907-8018 | <https://mydware.com>**

**Answer:** We own the problems with all line-of-business applications for our clients. That doesn't mean we can fix faulty software – but we WILL be the liaison between you and your vendor to resolve problems you are having and make sure these applications work smoothly for you instead of pointing fingers and putting you in the middle.

**Question:** When something goes wrong with your Internet service, phone systems, printers or other IT services, do they own the problem or do they say, "That's not our problem to fix"?

**Answer:** We feel WE should own the problem for our clients so they don't have to try and resolve any of these issues on their own – that's just plain old good service and something many computer guys won't do.

## Case Studies: What Our Clients Have To Say About Moving To The Cloud

**Len Ferragine**  
Bradford Greenhouses Ltd.

**“MYDWARE has been instrumental in finding operational efficiencies thru cloud based initiatives, and by lowering our in house technology burden.”**

MYDWARE has quickly become a trusted valuable part of our business at Bradford Greenhouses.

In a very short time, MYDWARE has transformed the way we manage and interact with our IT systems. They have been instrumental in finding operational efficiencies thru cloud-based initiatives, and by lowering our in house technology burden.

MYDWARE has implemented countless new initiatives including a Cybersecurity solution, HELP-DESK, secure remote access to all servers & computers, cloud base back-up, a cloud VoIP phone system, and more to come.

MYDWARE manages and works with our vendors to find innovative solutions, and ways to streamline our processes. I really like that I no longer have to manage dozens of vendors on my own. This is such a relief and saves me time and aggravation.

Most recently, MYDWARE took the time to explain the importance of cybersecurity and have since implemented a comprehensive program that makes me feel safe and secure.

In each interaction, I have found their team to be knowledgeable, professional, and very responsive to our needs. Without hesitation, I recommend MYDWARE to any business owner looking to grow their business and find efficiencies thru their technology.

## Free Assessment Shows You How To Migrate To The Cloud And Avoid Overpaying For Your Next IT Project Or Upgrade

If you're like a number of CEOs we've helped, you've already been burned, disappointed and frustrated by the questionable advice and **complete lack of service** you've gotten from other IT companies. In fact, you might be so fed up and disgusted from being "sold" that you don't trust anyone. *I don't blame you.*

That's why I'd like to offer you a **FREE Cloud Readiness Assessment** to show you there IS a better way to upgrade your computer network AND to demonstrate how a truly competent IT consultant (not just a computer "mechanic") can guide your company to greater profits and efficiencies, help you be more strategic and give you the tools and systems to fuel growth.

**At no cost or obligation**, one of my lead consultants and I will come to your office and conduct a thorough review and inventory of your current computer network, backups and technologies to give you straightforward answers to the following:

- ✓ How using cloud technologies may be able to eliminate the cost, complexity and problems of managing your own in-house server while giving you more freedom, lowered costs, tighter security and instant disaster recovery. I say "may" because it might NOT be the best choice for you. I'll give you honest answers to your questions and detail – in plain English – the pros AND cons of moving your specific operations to the cloud.
- ✓ Are your IT systems truly safe and secured from hackers, viruses and rogue employees? (FACT: 99% of the computer networks we review are NOT, much to the surprise of the CEOs who are paying some other "so-called" expert to manage that aspect of their IT.)
- ✓ Are your backups configured properly to ensure that you could be back up and running again fast in a disaster? From our experience, most companies' backups are an epic waste of money and only deliver a false sense of security.
- ✓ If you are ALREADY using "cloud" technologies, are you adequately protecting your organization from the dozens of ways you and your organization can be harmed, sued or financially devastated due to security leaks, theft, data loss, hacks and violating ever-expanding data privacy laws?

Even if you decide not to move your network to the cloud or engage with us as a client, you'll find the information we share with you to be extremely valuable and eye-opening when you make future decisions about IT. After all, it NEVER hurts to get a third-party "checkup" of your IT systems' security, backups and stability, as well as a competitive cost analysis.

## There Is One Small “Catch”

Because our Cloud Readiness Assessments take between five and seven hours to complete (with most of this “behind-the-scenes” diagnostics and research we conduct), I can only extend this offer to the first seven people who respond. After that, we’ll have to withdraw this offer or ask that you pay our customary consulting fee of \$350 for this Assessment (sorry, no exceptions).

**To respond, please call our office at 905-731-9687 and ask for me.** I personally want to take your call to answer any questions about this letter, my company and how we might be able to help you, CEO to CEO. You can also e-mail us at [sales@mydware.com](mailto:sales@mydware.com)

Awaiting your response,

Darryl Cresswell

# The Top 7 Reasons Why You'll Want To Outsource Your IT Support To Us:

1. **We Respond Within 5 Minutes Or Less.** The average amount of time it takes for one of our clients to get on the phone with a technician who can start working on resolving your problem is 3.5 minutes. We know you're busy and have made a sincere commitment to making sure your computer problems get fixed FAST. And since most repairs can be done remotely using our secure management tools, you don't have to wait around for a technician to show up.
2. **No Geek-Speak.** You deserve to get answers to your questions in PLAIN ENGLISH, not in confusing technical terms. Our technicians will also not talk down to you or make you feel stupid because you don't understand how all this "technology" works. That's our job!
3. **100% No-Small-Print Satisfaction Guarantee.** Quite simply, if you are not happy with our work, we'll do whatever it takes to make it right to YOUR standards without charging you for it. And if we can't make it right, the service is free.
4. **All Projects Are Completed On Time And On Budget.** When you hire us to complete a project for you, we won't nickel-and-dime you with unforeseen or unexpected charges or delays. We guarantee to deliver precisely what we promised to deliver, on time and on budget, with no excuses.
5. **Lower Costs, Waste And Complexity With Cloud Solutions.** By utilizing cloud computing and other advanced technologies, we can eliminate the cost, complexity and problems of managing your own in-house server while giving you more freedom, lowered costs, tighter security and instant disaster recovery.
6. **We Won't Hold You Hostage.** Many IT companies do NOT provide their clients with simple and easy-to-understand documentation that outlines key network resources, passwords, licenses, etc. By keeping that to themselves, IT companies hold their clients "hostage" to scare them away from hiring someone else. This is both unethical and unprofessional. As a client of ours, we'll provide you with full, written documentation of your network and all the resources, software licenses, passwords, hardware, etc., in simple terms so YOU can understand it. We keep our clients by delivering exceptional service – not by keeping them in the dark.
7. **Peace Of Mind.** Because we monitor all of our clients' networks 24/7/365, you never have to worry that a virus has spread, a hacker has broken in or a backup has failed to perform. We watch over your entire network, taking the management and hassle of maintaining it off your hands. This frees you to focus on your customers and running your business, not on your IT systems, security and backups.
